

DIGITHEATRE

Digital Home Cinema Speaker System

Complete home cinema speaker system

DigiTheatre DTS consists of a dedicated centre speaker with built-in decoder, four satellite speakers and a subwoofer with integrated multi-channel amplifier delivering a massive 220W true RMS. The centre speaker's integrated control panel provides adjustment of all system functions.

DTS surround sound for DVD movies

Advanced high-performance DSP fully enables decode of the latest mind-blowing DTS (Digital Theater Systems) soundtracks and the new-format DTS and Dolby Digital Audio CDs.

Backward compatibility with Dolby Digital

Fully compatible with earlier surround sound standards, DigiTheatre DTS fully supports Dolby Digital 5.1 (AC-3) as well as Dolby Pro Logic material played on your NICAM VCR or TV. DigiTheatre DTS also plays stereo surround sound from any standard stereo input with the choice of 'Hall' or 'Theatre' effect modes.

Hi-fi quality components

Centre speaker with 4" bass/mid frequency drive unit and concentric high-frequency tweeter for clear, powerful dialogue. Four satellite speakers, as used in the award-winning Sirocco Crossfire speaker system, with twin Audax drive units housed in ultra-compact acoustically tuned cabinets. Subwoofer with massive 8" long-throw bass drive unit for thunderous low frequency effects.

Multiple inputs

Optical and coaxial digital (S/PDIF) inputs enable you to connect to any DVD player or DVD-capable PC (with a digital output) for Dolby Digital or DTS surround sound, or to CD/MiniDisc/PC with digital output for stereo surround sound. An input is also available for other analog stereo sources such as NICAM VCR/TV, CD, MiniDisc or PC.

Easy to set up and use

With its integrated amplifier and decoder DigiTheatre DTS is easy to connect and easy to use. System controls are integrated into the centre speaker and all system functions are accessible directly from this control panel or via the supplied remote control.
